

REVATURE QE · PROJECT 0

Revature Expense Manager

A console-based expense tracking system.

Matthew Washburn • **Liam Rich**

github.com/QEA2026/team6-p0

Project Overview

A console-based expense manager. Employees submit expenses through a Python CLI; managers review and approve them through a Java CLI, backed by a shared SQLite database.

Two role-based apps

Employee (Python) & Manager (Java) CLIs

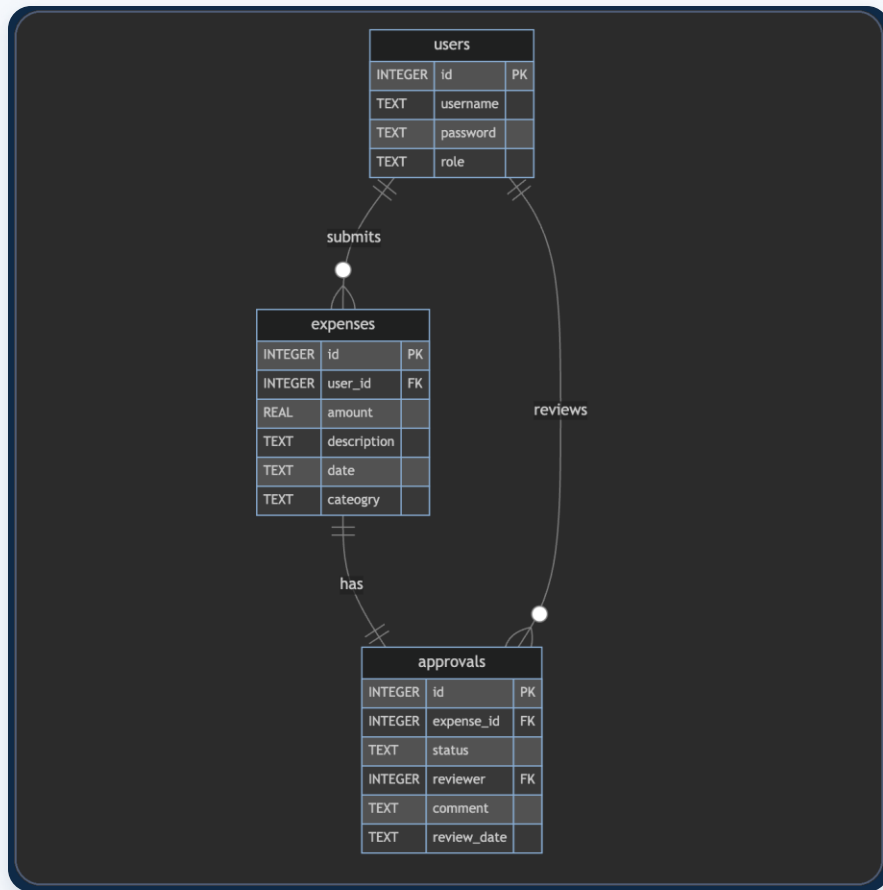

Full expense lifecycle

Submit → review → approve or deny → view history

Shared SQLite database

One source of truth for both apps

Entity Relationship Diagram · users · expenses · approvals

Tech Stack

The languages, framework, and tools behind the build

Python 3

Employee CLI & data entry

Java 17

Manager CLI & approval logic

SQLite

Shared relational database

Flask

REST endpoints for expenses

Git & GitHub

Goals and progress

Team Member	Priorities since we last met	Priorities until we meet again
@Liam Rich	- Finish report user story - CLI - Testing - Category field	- CLI - Testing
@Matthew Washburn	- Approval table endpoints - Separate expenses by status in CLI - Add category field to expenses CLI and backend	- Slideshow: Names, Tech Stack, ERD, Agile development process - Approvals differentiation

Daily standup notes
